Every rupee, exactly where it was allocated.

APPLICATION FOR THE FINANCIAL ACCOUNTABILITY COMMITTEE MEMBER · 2026–27

Dhawal Khatri
CE23B063 · B.Tech Civil Engineering

WHAT FOLLOWS

01 Transparency & accountability

02 A discrepancy with no clear intent

03 Conflict inside the committee

04 A request beyond the allocation

05 Track record in financial oversight

06 Long-term vision

₹1 Cr+
Already live on the SLC portal, and scaling as sessions conclude.

2 roles
CFI Finance Manager and Head of the Finance Club, held concurrently.

45 days
The randomised spot-check cadence I propose the FAC adopt.

Oversight built into the workflow, not bolted on after it.

01

Deviation control

Money cannot leave an SLC-approved line item. Deviations come to the FAC **in writing, before the spend**.

02

Evidence verification

Travel PNRs checked on official portals. Vendor GSTINs validated. E-invoice IRN matched to billed date and amount.

03

45-day spot-checks

One organisation drawn at random every 45 days and reviewed in full, so records stay clean year-round.

04

Whistleblower channel

The portal's feedback module, made anonymous and secure. Primary evidence is **mandatory** to open a case — which keeps frivolous claims out.

05

Treasurer onboarding

Mandatory orientation on itemisation, identifying valid GST bills, and portal procedure. Most discrepancies are bookkeeping, not malice.

Treat it as a systems failure, then fix the system.

Secure the funds first, resolve the error in the open, and leave a guardrail behind so the same mistake cannot recur.

STEP 01

Hold the money

The moment a discrepancy is spotted I contact the STACT office to halt disbursement for that request. With the funds secure, receipts are compared against the ledger to pinpoint the exact mismatch — a missing invoice page, or a simple miscalculation.

STEP 02

Both parties, one table

Joint fact-finding with the concerned secretary **and** the Standing Committee that passed the bill — keeping the Committee in the loop is essential. Rather than accuse, I ask them to walk me through their submission and approval process.

STEP 03

Fix, then re-audit

If the discussion confirms a non-malicious error, the team is guided through a formal correction: missing documentation submitted, ledger entries fixed. The updated file is re-audited by the FAC, and only then is STACT told the hold can be lifted.

STEP 04

On the record

The FAC is an investigative body, so findings are recorded whatever the outcome. A concise, objective report — the initial mismatch, what the discussion found, the clear lack of malicious intent, and the corrective action taken — is filed to the SLC and the SECC.

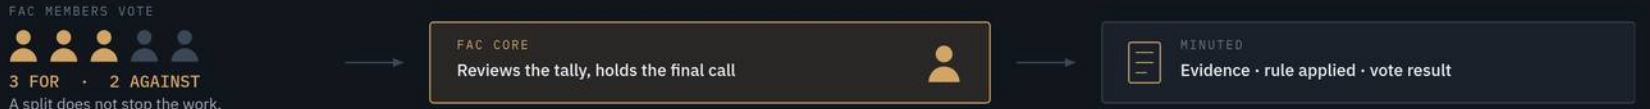

STEP 05

Remove the cause

An honest arithmetic slip means the system leans too heavily on manual work. Every bill is uploaded to the portal before it reaches STACT, and the portal extracts and tallies the amounts itself — so a manual calculation error can never reach the office again.

Disagreement is expected. Stalling an investigation is not.

01

Cohesion before the pressure

Continuous team-bonding among FAC members, built deliberately and early. A team that trusts each other argues about the evidence rather than about each other.

02

The rules apply to everyone

A member's friendship or affiliation with the secretary under investigation is **set aside entirely**. The debate returns to the guidelines, the audit standard, and the evidence on the portal.

03

A vote, then the Core

At a genuine impasse, a formal internal vote among elected members so every reading of the facts is counted. The FAC Core reviews the result and holds the final call.

04

Everything on the record

Evidence reviewed, rules applied and voting results documented whether the decision was unanimous or divided — an audit trail for the SLC, and cover against later claims of bias.

Flexible on the emergency. Fixed on the standard.

01

Validate the shock

Vendor mail proving the price hike, plus a burn-rate audit: was core spending protected before the money ran out?

02

Reallocate, don't inflate

Dormant funds elsewhere on the portal move across. No central reserve is drained.

03

Cover part, conditionally

The team raises the rest through sponsorship or cost-cutting. No zero-consequence bailouts.

04

Publish the reasoning

The Core makes the final call, and the proof plus the **exact source** of the reallocated funds go to the transparency dashboard for the SLC.

05

Buffer it next time

A small, strictly regulated contingency line in every major proposal, so the next minor shock needs no emergency request at all.

I have already done both halves of this job.

Institutional auditing across many clubs, and hands-on allocation inside one — held at the same time.

ROLE

Finance Manager

CENTRE FOR INNOVATION

The central authority cross-checking budgets for every club under CFI: representing requirements to STACT, checking bills for compliance, owning documentation, and auditing how the money was finally used.

INSTITUTIONAL OVERSIGHT

ROLE

Head of the Finance Club

IIT MADRAS

Owned the Finance Club's internal budget end to end — securing and finalising sponsorship, then allocating that capital across club initiatives for maximum student impact under strict budgetary discipline.

STRATEGIC ALLOCATION

METHOD

Core before supplementary

Requests are sorted into core activities essential to the mission and supplementary ones. Core initiatives with broad campus value take precedence, then requests are weighted by past utilisation efficiency and accurate bookkeeping.

HOW I PRIORITISE

METHOD

Evidence, then monitoring

Every claim, from an opening proposal to a post-event reimbursement, is backed by verifiable primary evidence — and actual spend is cross-checked against the approved ledger throughout the year, not signed off once at the end.

HOW I ENFORCE

Five reforms to carry through my tenure.

Moving the FAC from a reactive, punitive body into a proactive institution that student organisations can actually work with.

01

Technology

One financial hub as the single source of truth, code-generated burn-rate views, and automatic flags on overruns, duplicate invoices and unknown vendors.

02

Literacy

Treasury training past basic bookkeeping: contingency planning, judging proposals on long-term value, and conflict-of-interest ethics.

03

Standardisation

A version-controlled SOP repository so precedent survives the handover between years, with tiered compliance so small groups aren't buried in a large secretariat's process.

04

Autonomy

Greater independence over FAC recruitment and operations so investigations move without procedural delay, a protected complainant channel, and randomised plus end-of-year audits.

05

Community

A public dashboard of campus expenditure and audit outcomes, peer review between treasurers of different domains, and an open forum at the close of each audit cycle.

A guardian of student funds, not an auditor of last resort.

The budget on the portal is past ₹1 Crore and still growing. The question is no longer whether the FAC can review it in time — it is whether oversight runs continuously, inside the system the money already moves through.

THE REACTIVE MODEL

- Ledgers audited only at the end of the cycle
- Manual tallies reach STACT unchecked
- Problems surface long after the money is spent

→

OVERSIGHT THAT RUNS CONTINUOUSLY

- Verification sits inside the portal the money moves through
- The portal tallies every bill automatically
- One organisation reviewed at random every 45 days

01

Hold the line items

Funds stay where the SLC voted them. Deviations come to the FAC first, in writing, before the money moves.

02

Verify the evidence, not the claim

PNR, GSTIN and e-invoice IRN checked against source. A bill is trusted because it was tested.

03

Publish what we find

Findings, reallocations and the reasoning behind them on a public dashboard, and an open forum after every cycle.

Thank you.
